

Turn Your Lessons into AI-Powered Learning

TEACHING & LEARNING WITH AI CERTIFICATE

Redesign a real lesson using AI through a practical, step-by-step process and leave with a classroom-ready result you can use immediately.

What You'll Do in This Program

This 6-week online program is designed for educators ready to move beyond AI tips and tricks and into meaningful classroom transformation. Through a step-by-step, hands-on approach, participants redesign one of their own lessons using AI to create engaging, personalized, and classroom-ready learning experiences.

Grounded in a proven instructional design framework, the program helps educators thoughtfully integrate AI to strengthen effective teaching practices and design learning experiences that keep students thinking, creating, and actively engaged. AI is used to enhance learning—not replace it—while keeping student thinking and creativity at the center.
